# Uveitis educational program 2022-2024

By the SOG Uveitis Group

In collaboration with the Young Swiss Ophthalmologists

University Eye Hospital, **Basel**: June 8th 2022

Hôpital Jules Gonin, **Lausanne**: September 29th 2022

Berner Augenklinik, **Bern** : November 2<sup>nd</sup> 2023

Stadtspital Triemli, **Zürich** : to be announced

**Uveitis is a complex multifactorial disease, and it encompasses many clinical entities.** Treating uveitis patients requires multi-disciplinary approach in many fields of medicine apart from ophthalmology, including rheumatology, pneumology, internal medicine in general, dermatology etc. In comparison to macular degeneration, cataract or glaucoma patients, the number of uveitis patient is lower, but the requirements in terms of knowledge and skills are quite high (Smith et al. Education in the ophthalmic discipline of uveitis. Am J Ophthalmol 2008; 146: 799-801); for this reason, among others, teaching uveitis to ophthalmology residents does not obtain the time and focus it indeed takes.

**“Flair for Flare” is an educational program** brought to life by the SOG Swiss Uveitis Group with an intention to fill in the gap. Envisioned is creating **a group of 5-10 residents**, screened and recruited from the involved centers (at present **Lausanne, Basel, Bern, Zürich**) with an assistance from the SOG YSO (Young Swiss Ophthalmologist). This group would in **a time frame of two years** visit each uveitis center in Switzerland, the four above mentioned, for one day.

Each participant is asked to present one interested **cases**. Each case should take 10-12 minutes.
