1st Ocular Blood Flow Summit 2019

Ocular blood flow (OBF) not only plays a key role in many eye diseases but also reflects the vascular general health of a patient. In recent times, there has been significant progress in the diagnosis, treatment, and prophylaxis of OBF dysfunction. This has motivated Prof. Flammer and Dr Konieczka to organise a state-of-the-art meeting where experts in the field of OBF meet in order to share their experience and expertise. Thankfully, many internationally renowned clinicians and scientists have already agreed to join the 1st Ocular Blood Flow Summit 2019.
